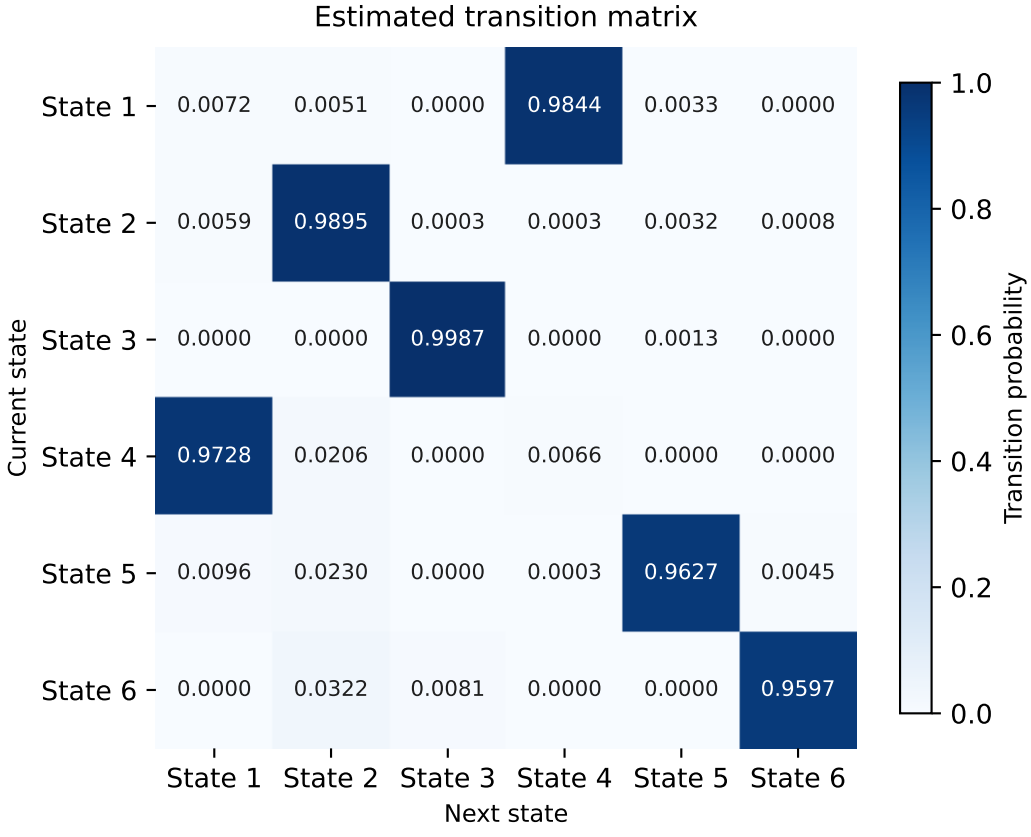
HMM Transition Matrix: State Transition Probabilities and Regime Persistence



State persistence

State	P(i→i)	E[duration]
1	0.0072	1.0
2	0.9895	95.2
3	0.9987	742.0
4	0.0066	1.0
5	0.9627	26.8
6	0.9597	24.8

Interpretation: States 2–3 are the most persistent calm regimes; States 1 and 4 are short-lived but high-turnover, with 26 observed 1↔4 switches. Fitted P(1→4)=0.9844 and P(4→1)=0.9728. States 5–6 are the rare, stressed states.
